

EDITORIAL TRACKS

FOOD & AGRICULTURAL SCIENCE

More than ever, society is concerned about the type of food that is being consumed, and where that food is coming from—whether it's from the land or the lab. Our Food Science sub-track coverage has included the next generation of plant-based food product ingredients, such as algae, and the companies racing to further develop them. And our Agricultural Science sub-track features have covered how seaweed is being farmed for food and fuel.
